Be Prepared.

Make sure to add calibration supplies to your gas monitor rental order. Each day, prior to use, a functional (bump) test should be performed. This verifies calibration by exposing the instrument to a known concentration of test gas. The instrument reading is compared to the actual quantity of gas present, but more importantly, the audible and visual alarms are verified to be functioning correctly. Otherwise, a full calibration must be performed.

Call your U.S. Environmental representative for more information.

STAY ON SCHEDULE

If, for any reason, you have a problem with our instrumentation, call our reliable, expert technicians. They are factory trained and can solve almost any problem you have in the field. In the meantime, here's a few tips to remember:

- **Check the battery.** The most common problem we hear about is low voltage on the battery. Most batteries are field replaceable.
- **Filters.** Most air quality meters need to be used with clean filters. Make sure the filters are clean and being used correctly.
- **Connections.** All connections need to be made to the appropriate connector and secure. Make sure to double check each connection throughout the entire system.
- **Weather Conditions.** Except for submersible pumps and submersible water quality sensors, our rental equipment is not waterproof. Also, most electronics will malfunction if stored or used in high heat, high humidity, direct sunlight, or below freezing temperatures.
- **Power off.** All small electronics have glitches from time to time. Sometimes fixing these is as easy as powering off and back on a few seconds later. Also, some of our equipment have cold-start functions, reset functions, and/or return to factory settings functions.

THE
BEST RENTAL EXPERIENCE POSSIBLE

Just a few of the benefits our satisfied clients enjoy

Flexible Rental Schedules: We recognize that your projects do not always last just one day, one week, or one month.

Long-Term Rentals: With our Long-Term Rental program, you enjoy the best of both worlds; it's like owning the equipment, but with the savings and low liability of rentals.

We're Local: Our convenient location, delivery service, and Fed Ex Shipping center mean you'll never have to worry about waiting for your equipment or supplies to arrive. No on site down-time.

Experience: We have the most experienced associates in our industry. Our knowledgeable sales team and technicians will provide training and help you through difficult decisions and on-site troubleshooting.

Expansive Inventory: We have new, updated equipment and supplies to address just about every environmental monitoring situation.

Technology: We genuinely enjoy studying and applying the newest technologies to our business and your applications.

Simple, Smart Accounting: With paperless invoices and prompt pay discounts, you save time & money.

So much more than rentals...

Since 1996, our family-owned company has been a leader in providing rentals of environmental and safety monitoring equipment, accessories, and related items. However, we do so much more. Not only are we *authorized resellers and distributors* for nearly all of the manufacturers we represent; we also have experienced, *factory-trained technicians* available for *training, service, and repairs* at each of our locations.
